“ With Silver bullets, second edition, you have a collection of very good, engaging, and fun activities that really work, that have the “ magic ” . There are many new activities here&... [with] the security of knowing that these activities have been tested in many variable settings and curricula&... Karl Rohnke&... is the godfather of the evolution of activities that can be used effectively in a variety of curricula and situations that have social and emotional outcomes as their goal. ”

Visualization is the graphic presentation of data -- portrayals meant to reveal complex information at a glance. Think of the familiar map of the New York City subway system, or a diagram of the human brain. Successful visualizations are beautiful not only for their aesthetic design, but also for elegant layers of detail that efficiently generate insight and new understanding. This book examines the methods of two dozen visualization experts who approach their projects from a variety of perspectives -- as artists, designers, commentators, scientists, analysts, statisticians, and more. Together they demonstrate how visualization can help us make sense of the world. Explore the importance of storytelling with a simple visualization exercise Learn how color conveys information that our brains recognize before we're fully aware of it Discover how the books we buy and the people we associate with reveal clues to our deeper selves Recognize a method to the madness of air travel with a visualization of civilian air traffic Find out how researchers investigate unknown phenomena, from initial sketches to published papers Contributors include: Nick Bilton, Michael E. Driscoll, Jonathan Feinberg, Danyel Fisher, Jessica Hagy, Gregor Hochmuth, Todd Holloway, Noah Iliinsky, Eddie Jabbour, Valdean Klump, Aaron Koblin, Robert Kosara, Valdis Krebs, JoAnn Kuchera-Morin et al., Andrew Odewahn, Adam Perer, Anders Persson, Maximilian Schich, Matthias Shapiro, Julie Steele, Moritz Stefaner, Jer Thorp, Fernanda Viegas, Martin Wattenberg, and Michael Young.

Strengthen your observational skills by spotting the differences in more than 115 beautiful and interesting picture puzzles!

This publication examines art, the human sciences, science, philosophy, mysticism, language and literature. For this task, UNESCO has chosen scholars and experts from all over the world who belong to widely divergent cultural and religious backgrounds.--Publisher's description.

What do "I Scream!" and "Ice Cream!" have in common? Nothing—besides the fact that they sound the same! The ever-surprising Amy Krouse Rosenthal unleashes her prolific wit in this silly and smart book of wordplay. Perfectly complemented by equally clever illustrations from the talented and internationally renowned Serge Bloch, this mind-bending book will have young readers thinking about words in an entirely new way!

“ An eloquent expression of a great hope that philosophy may again become an activity really relevant not only to the perennial problems of life and death but to the unusual configurations of such problems in our time. ” —Julian N. Hartt, Yale Review “ Original, sincere, cultivated, and stimulating. ” —Philosophy One of the founders of existentialism, the eminent philosopher Karl Jaspers here presents for the general reader an introduction to philosophy. In doing so, he also offers a lucid summary of his own philosophical thought. In Jaspers ’

view, the source of philosophy is to be found “ in wonder, in doubt, in a sense of forsakenness, ” and the philosophical quest is a process of continual change and self-discovery. In a new foreword to this edition, Richard M. Owsley provides a brief overview of Jaspers ’ life and achievement.

Here's a book that describes Web 2.0 tools in-depth, models Web 2.0 tools through classroom examples, explains how to get started with each tool, presents practical unit plans illustrating the use of Web 2.0 in the K-12 content-area curricula, and identifies and describes what tools are most useful to educators for networking, productivity and insight into the technologies. Part 1 of each chapter answers many questions you will have about Web 2.0 and social networking tools: What is the tool? Why use it with students? How are K-12 classrooms using the tool? Can you provide me with specific examples for my science, history, or language arts curriculum? Part 2 describes specific tools and the steps to get started. Part 3 contains a detailed sample unit plan, teacher exercises and a summary following. Screen shots of websites are used to make the advice straightforward and easy to understand. You'll find an entire chapter on special instruction for ESL students with objectives, tools, and K-12 classroom examples. To help you implement Web 2.0 tools beyond the curriculum, there's even a chapter devoted to technology tools specifically designed for teachers and librarians to use for personal productivity, communication, and collaboration. The conclusion offers ideas for integrating Web 2.0 in art, music, and health. Exciting examples of the book's contents include: Collaborating and Communicating with Blogs Creating Multidisciplinary Wikis Google Tools: Enhancing Instruction in the Science Curriculum K-12 Classrooms Join the Social Networking Revolution Using VoiceThread and Video to Improve Language Development Creating Community In addition to the great content you'll find in the book, Using Web 2.0 and Social Networking Tools in the K-12 Classroom features a companion Web site that provides the most current curriculum examples from pioneering educators around the world, as well as up-to-date exercises and lessons in subject areas and grade levels.

"The official style guide used by the writers and editors of the world's most authoritative news organization."

Text-to-Speech Synthesis provides a complete, end-to-end account of the process of generating speech by computer. Giving an in-depth explanation of all aspects of current speech synthesis technology, it assumes no specialised prior knowledge. Introductory chapters on linguistics, phonetics, signal processing and speech signals lay the foundation, with subsequent material explaining how this knowledge is put to use in building practical systems that generate speech. Including coverage of the very latest techniques such as unit selection, hidden Markov model synthesis, and statistical text analysis, explanations of the more traditional techniques such as format synthesis and synthesis by rule are also provided. Weaving together the various strands of this multidisciplinary field, the book is designed for graduate students in electrical engineering, computer science, and linguistics. It is also an ideal reference for practitioners in the fields of human communication interaction and telephony.
