experiences in their Bahamian high schools. Drawing on cultural psychology and sociocultural theories of learning, this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only. The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics. Of the three participants, two have had to learn/develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so. Each of the

cases also highlights some powerful constructs needed for success in mathematics and at least two emphasize making connections between concepts, procedures, manipulatives/tools and multiple approaches when solving problems. This study contributes to an emerging area of research on student persistence in college-level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role/importance of conceptual understanding and how to promote it. The study makes visible some of the ways in which students' post-secondary experiences with mathematics

are shaped by their perception of their mathematical preparation, thus providing a basis for discussions of possible curricular change in the Bahamas. It also suggests that issues such as confidence and school/teacher expectations of students may play a role in the development of conceptual understanding.

Practicing Mathematics for BGCSE Success was designed specifically for seniors sitting the Mathematics BGCSE examination. This book is the first of 3 resources used in preparation for the exam. It provides practice questions typically found on paper 1 of the

examination. The concept of 'practicing' helps students to become more familiar with the topics covered, and hence it is believed that it leads to better success in the exam. Students are highly encouraged to purchase books 1,2 and 3 for maximum results. This series is authored by Mrs. Paula Burrows, a Mathematics teacher employed by the Ministry of Education in the Bahamas for the past 20 years.

English and African languages in an era in which English is increasingly becoming the dominant language in Africa while at the same time there is a growing resistance against it. Though many Africans take pride in their own cultural heritage that is expressed by their African languages, they require the economic and social benefits of English. The book presents a language dilemma in which both African languages and English enhance, inhibit, and influence each other. The data used by the authors spans a broad spectrum of sources including: fiction, courts, parliamentary Hansards, House of Chiefs,

classrooms, internet, roads and bus ranks. Thus, it is reflective of the most and least educated, the most and least influential Africans. The presentations provide broad insights about African symbols, metaphors, imagery and folklores representing undocumented literature that challenge scientific imperialism and deficit theories. The diversity and freshness of the ideas in the book stem from the unique blend of the background of the contributors: English language and literature teachers, teachers of African languages, educationalists, sociologists, historians and politicians.

nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines

a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific

and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve
