English Alive is a four-book series designed specifically to meet the needs of English students in Caribbean secondary schools. The series adopts a lively and exciting new approach to the study of English, helping students to become more confident in their use of English and ultimately succeed at their exam.

HVAC Training 101 is a site visited by over 100,000 enthusiasts monthly, who are interested in becoming HVAC technicians. The site initially began as the passion project of a retired HVAC technician. The site quickly gained popularity, building a strong community of aspiring HVAC technicians. Currently, it is managed by a team of ex-HVAC technicians with decades of experience in the industry. Head over to [HVACTraining101.Com](http://HVACTraining101.Com) to learn more. We began by writing about how to become certified as an HVAC technician. With rules and certifications varying for each state, it was a challenging task. We had a few friends in other states help us out, but for some states, we had to dig really deep to find the information needed. Our audience at the time was very happy with the information we provided. At this point, we started getting many questions about EPA 608 certification. Once you get the education and experience needed to become a technician, prospective employers will ask for certification to handle refrigerants. When we started writing about how to become certified, viewers again requested we write a study guide to help them prepare for the 608 exams. The study guides out there were dense and had much more information than was needed to pass the test. This inspired us to embark on a journey to write the simplest study guide for the EPA 608 exam, which would still cover all the necessary information. We hope we have achieved our intended objective. The journey to becoming an HVAC technician can be long and arduous. We congratulate you on taking this path and wish you the best in cracking the EPA 608 exam.

A wickedly clever satire uses comic inversions to offer telling insights into the nature of man and society. Nominated as one of America's best-loved novels by PBS's *The Great American Read* *Gulliver's Travels* describes the four voyages of Lemuel Gulliver, a ship's surgeon. In Lilliput he discovers a world in miniature; towering over the people and their city, he is able to view their society from the viewpoint of a god. However, in Brobdingnag, a land of giants, tiny Gulliver himself comes under observation, exhibited as a curiosity at markets and fairs. In Laputa, a flying island, he encounters a society of speculators and projectors who have lost all grip on everyday reality; while they plan and calculate, their country lies in ruins. Gulliver's final voyage takes him to the land of the Houyhnhnms, gentle horses whom he quickly comes to admire - in contrast to the Yahoos, filthy bestial creatures who bear a disturbing resemblance to humans. This text, based on the first edition of 1726, reproduces all the original illustrations and includes an introduction by Robert Demaria, Jr, which discusses the ways *Gulliver's Travels* has been interpreted since its first publication. Jonathan Swift (1667-1745) was born in Dublin. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

Food engineering is a required class in food science programs, as outlined by the Institute for Food Technologists (IFT). The concepts and applications are also required for professionals in food processing and manufacturing to attain the highest standards of food safety and quality. The third edition of this successful textbook succinctly presents the engineering concepts and unit operations used in food processing, in a unique blend of principles with applications. The authors use their many years of teaching to present food engineering concepts in a logical progression that covers the standard course

curriculum. Each chapter describes the application of a particular principle followed by the quantitative relationships that define the related processes, solved examples, and problems to test understanding. The subjects the authors have selected to illustrate engineering principles demonstrate the relationship of engineering to the chemistry, microbiology, nutrition and processing of foods. Topics incorporate both traditional and contemporary food processing operations.

The study of Roman imperial statues has made remarkable strides in the last two decades. Yet the field's understandable focus on extant portraits has made it difficult to generalize accurately. Most notably, bronze was usually the material of choice, but its high scrap value meant that such statues were inevitably melted down, so that almost all surviving statues are of stone. By examining the much larger and more representative body of statue bases, Jakob Munk Hojte is here able to situate the statues themselves in context. This volume includes a catalogue of 2300 known statue bases from more than 800 sites within and without the Roman Empire. Moreover, since it covers a period of 250 years, it allows for the first time consistent geographic, chronological and commemorative patterns to emerge. Hojte finds among other things that imperial portrait statues are connected chiefly with urban centres; that they were raised continuously during a given reign, with a higher concentration a couple years after accession; that a primary purpose was often to advertise a donor's merits; and that they increased sixfold in frequency from Augustus to Hadrian, an increase attributable to community erections. Jakob Munk Hojte is post.doc. and research assistant at the Danish National Research Foundations Centre for Black Sea Studies.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

"The Curious Case of Benjamin Button" is a short story written by F. Scott Fitzgerald. First published in Collier's Magazine on May 27, 1922 with the cover and illustrations by James Montgomery Flagg. It was subsequently anthologized in Fitzgerald's book *Tales of the Jazz Age*, which is occasionally published as *The Curious Case of Benjamin Button and Other Jazz Age Stories*. In 1860 Baltimore, Benjamin is born with the physical appearance of a 70-year-old man, already capable of speech. His father Roger invites neighborhood boys to play with him and orders him to play with children's toys, but Benjamin obeys only to please his father. At five, Benjamin is sent to kindergarten but is quickly withdrawn after he repeatedly falls asleep during child activities.
