Of all the formative experiences in a character's past, none are more destructive than emotional wounds. The aftershocks of trauma can change who they are, alter what they believe, and sabotage their ability to achieve meaningful goals, all of which will affect the trajectory of a story. Enter *The Emotional Wound Thesaurus*, which explores over 100 possible traumatic experiences from a character's past and how they can impact the character in the present. Armed with this unique resource, authors will be able to root their characters in reality by giving them an authentic wound that causes difficulties and prompts them to strive for inner growth to overcome it.

Introducing a NEW addition to our growing library of computer science titles, *Algorithm Design and Applications*, by Michael T. Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their

potential applications, increasing engagement.

Using castings from your charcoal foundry (see Book 1 in the series: The Charcoal Foundry by David Gingery) and simple hand methods (no machine tools needed!) you can build a sturdy and accurate bed for a metal lathe. Then additional castings, common hardware items and improvised equipment will add the headstock, tailstock, carriage and all the remaining parts to complete the lathe. Illustrated with photos and drawings to show you all you need to know about patterns, molding, casting and finishing the parts. The lathe specs. include a 7" swing over the bed and 12" between centers. Adjustable tailstock with set-over for taper turning. Adjustable gibs in sliding members and adjustable sleeve bearings in the headstock. A truly practical machine capable of precision work. Once you have a foundry to cast the parts and a lathe to machine them you can tackle more exotic projects.

In the 1960s and 1970s, John Deere's tractors evolved dramatically from small machines into large, powerful tractors with modern advances and muscular engines; it was a period of the greatest changes since the 1920s. Deere christened these tractors the New Generation. This book in the Tractor Legacy series examines these Big Green machines in detail, with archival and current photography of restored tractors, a thorough historical text, and details of model specifications and variations.

Abstract: This pamphlet, written for the homeowner in the midwestern United States, gives the EPA safety recommendations for private lawn care. Common and trade names for pesticides and herbicides are cross referenced. Advice for selection of a lawn care service is included.

Following his decades in advertising, marketing and as a fully trained and very experienced hypnotherapist, John Smale has put together a number of stories and metaphors that have worked to help people to resolve a huge range of problems.
