Using big data analytics, this research covers top Chinese home appliance brands, including LCD TV, refrigerator, washing machine and air conditioner, with following analysis dimensions: brand ranking by the number of items available on online stores, ranking by sales, number of times online users mention about a particular brand, brand preferences, factors affecting purchase, as well as online shoppers' comments and user analysis. All those dimensions help build a massive social media database which can more accurately reflect consumer needs in China.

Since the start of the recent financial crisis, as most global firms struggle to remain competitive, an increasing number of Korean and Japanese firms have experienced an amazing rate of growth and expansion. Although academic researchers and business leaders in the United States, China, Brazil, India, and Europe seek out the secrets to these businesses' success, little is known about their business practices. Supplying an insider's perspective, Building Network Capabilities in Turbulent Competitive Environments: Practices of Global Firms from Korea and Japan unveils the strategic and operational practices that have allowed these firms to catch and surpass their competitors in North America and Europe. Based on fieldwork studies and extensive interviews with senior executives, it explains how these companies have developed and enhanced their core competencies through effective integration of product architecture, supply chain management, and IT strategy. The book provides practical insight into changing business patterns while avoiding extensive mathematical algorithms and drawn-out theoretical descriptions. It uses cutting-edge case studies to illustrate the innovative manufacturing strategies of these rapidly emerging companies. Accessible to anyone with a basic understanding of business, it reveals the organizational processes of strategy formulation and implementation that are required for success. Providing a clear understanding of both the career implications of the changing business landscape and how to deliver products and services that meet and exceed the needs of your customers, this book will help you develop the socio-technical skills needed to succeed in an increasingly competitive and turbulent business environment.

Maximum PC is the magazine that every computer fanatic, PC gamer or content creator must read. Each and every issue is packed with punishing product reviews, insightful and innovative how-to stories and the illuminating technical articles that enthusiasts crave.

Nikkei Microdevices' 2006 report on flat panel display (FPD) industry includes: -Exclusive in-depth interviews with 28 top executives in the industry -Over 250 information-packed figures, tables and pictures -Proprietary intelligence not available anywhere else In 2006, competitive conditions in the flat panel display (FPD) industry will change significantly. The era in which competition was primarily based on increasing investment and glass substrate sizes is over. Henceforth, overall capability, including parts/material strategy and equipment strategy, will become the decisive factor. By 2010, parts and material costs will account for 80% of the total cost of large-size LCD panels, which will drive future market expansions; thus, parts and materials will make up most of the value addition in panels. Leading panel makers are starting to reinforce their cooperative relationships with parts and material makers, as well as with equipment makers.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Communication technologies surround us in every part of our lives: via television, web, blogging, mass media, and much more. How do people in business keep up with the latest and greatest trends, and how do they differentiate good information from bad information? How do they get help analyzing information and coming to conclusions about trends that will impact their businesses and business decisions? How do they consider the environmental and sustainability issues surrounding communication technology? This book answers these essential questions. It's for professionals and students working in telecommunications, including electronic mass media, digital signage, computers, consumer electronics, games, satellites, and telepresence. The best of the best minds on these topics all come forward here, each in their own chapter, to report on, analyze, and make recommendations for the new edition of this definitive guide to new technologies. New to this edition: . New coverage of historical perspectives on communication technology bring the ideas and concepts to the forefront, providing a thoroughly grounded approach designed to appeal to professors looking for more the why's than the how's of comm. tech . New chapters on digital cinema, mobile commerce, digital television, cinema technologies, e-books, home video, digital audio, and telepresence. . As always, every chapter is updated to reflect the latest trends on the topic . Brand new! Instructor's manual with testbank and sample syllabus . Website - brand new for this edition. Chapter-by-chapter additional coverage of technologies and further resources. Continually updated.

Offers key historical and interpretative texts on the development and role of "the screen" in communications and the social sphere.
