Written specifically for Standard Grade, though appropriate for other UK Curricula, the series expertly covers all the areas students will need for complete success. Fully supported by a comprehensive teacher file.

The content follows the order of the Higher Still Unit specifications. Full explanatory text with worked examples allows an element of self-study. Graded exercises develop the questions beyond minimum competence level. End of chapter review exercises bring together the work of the chapter. Reminder notes in the exercises act as a quick revision aid for students. Calculator and non-calculator questions are included.

Originally published in 1986, this book consists of 100 problems in probability and statistics, together with solutions and, most importantly, extensive notes on the solutions. The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics. At this level, straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used, and possible alternatives. The solutions in the book are

therefore elaborated with extensive notes which add value to the solutions themselves. The notes enable the reader to discover relationships between various statistical techniques, and provide the confidence needed to tackle new problems. Keywords:Random Variables;Probability Distributions;Data Summarisation;Statistical Inference;Regression;CorrelationReviews:□What is most valuable about this book is the very high quality of the model solutions □ It is a problem book for those teaching or learning a first course in mathematical statistics □ This one is outstandingly good and highly recommended.□Goeff Cohen University of Edinburgh, Scotland □The authors of this useful book take the view that the ability to solve practical problems is fundamental to an understanding of statistical techniques □ The book is designed to be read alongside a standard text. I expect it is likely to be most useful to the teacher or to the able student forced to work largely alone.□David Green □This book not only provides a solution to each problem set but gives notes about that solution. These notes should help students to understand the reasoning behind the techniques used, so giving them confidence to deal with problems of a similar nature □ This book should prove a valuable addition to the library of students and teachers of statistics.□M J G Ansell Hatfield Polytechnic □The book consists of a series of examples, each followed by one or more alternative solutions and accompanying notes. The solutions themselves are useful models. The notes go one stage further and explain why particular techniques were chosen to

solve each problem. This approach may help to overcome the common difficulty of deciding which method to choose when answering examination questions □ The book is easy to read and suitable for individual study. □Richard J Field □These notes provide fascinating insights into the process that experienced statisticians go through in order to solve a problem. Students (and maybe some instructors) will benefit greatly from going through the solutions and the notes in this book. □Gudmund R Iversen Swarthmore College □The approach of the authors is to improve a student's understanding of statistics, and to help students appreciate which techniques might be appropriate for any problem. □Zentralblatt MATH

Written specifically for Standard Grade, though appropriate for other UK Curricula, the series expertly covers all the areas students will need for complete success. Fully supported by a comprehensive teacher file.

The programmed approach, established in the first two editions is maintained in the third and it provides a sound foundation from which the student can build a solid engineering understanding. This edition has been modified to reflect the changes in the syllabuses which students encounter before beginning undergraduate studies. The first two chapters include material that assumes the reader has little previous experience in maths. Written by Charles Evans who lectures at the University of Portsmouth and has been teaching engineering and applied mathematics for more than 25 years. This text provides one of the essential tools for both undergraduate students and professional engineers.

A concise survey of the current state of knowledge in 1972 about solving elliptic boundary-value eigenvalue problems with the help of a computer. This volume provides a case study in scientific computing?the art of utilizing physical intuition, mathematical theorems and algorithms, and modern computer technology to construct and explore realistic models of problems arising in the natural sciences and engineering.

All papers have been peer-reviewed. The main goal of this series of conferences is to bring together experts and young talented scientists from Bulgaria and abroad to discuss modern trends and to ensure exchange of views in various applications of mathematics in engineering, physics, economics, biology, etc. Keeping the main topics of the previous AMEE conferences as well as the big success of AMEE'07, this year's 34th issue was again subject to the motto "Nonlinear phenomena - mathematical theory and environmental reality." The organizing Committee encouraged the participation of senior and postgraduate students and organized a separate youth session. The invited speakers organized two special sessions. Within the 34th Conference AMEE'08 a "Round Table - Presentations and Discussion - on Mathematics Education in Bachelor Degree Programs and in Master Degree Programs," Conference Tutorial "Introduction to Software Agents and Their Applications," and Workshop on Grid and Scientific Engineering Application (GRID&SEA) took place. The publishing, promotion and distribution the proceedings among the mathematical and related societies taking an interest in its topics is an integral part of the Conference.
