This will ensure the performance reduction due to bending is kept to a minimum.

Mooring Equipment Guidelines (MEG4)

A ship ' s mooring equipment includes mechanisms, such as winches and capstans, that are used to take in and pay out mooring lines, which are ropes or steel cables. It also includes the following fittings: bitts and cleats, around which the mooring lines are made fast; stoppers, which temporarily hold the mooring lines; mooring chocks, rollers, and mooring pipes, which are used to change the direction of the mooring lines; manually operated or mechanized reels, on which the mooring lines are ...

also provides guidance on human centred design for safer mooring arrangements. Purchase MEG4.

OCIMF - Oil Companies International Marine Forum - MEG4
A mooring is any permanent structure to which a vessel may be secured. Examples include quays, wharfs, jetties, piers, anchor buoys, and mooring buoys. A ship is secured to a mooring to forestall free movement of the ship on the water. An anchor mooring fixes a vessel's position relative to a point on the bottom of a waterway without connecting the vessel to shore. As a verb, mooring refers to the act of attaching a vessel to a mooring. The term likely stems from the Dutch verb *meren*, used in En

Mooring - Wikipedia

For newbuilding projects, DNV GL recommends that mooring equipment and line selection follow the holistic approach prescribed in the latest guidelines, in order to ensure “ safe-to-use ” design. Yiyang notes that newbuild designs should identify and accommodate relevant mooring patterns and ensure that design criteria for mooring components are well defined.

Taking a new look at mooring safety - Industry insights ...

The biggest difference between docking and mooring your boat is the equipment that you use. When you dock your boat alongside a wharf, dock, or pier, you will need dock lines, fenders, and other equipment to secure your vessel. A

Mooring equipment for general cargo vessel

A mooring system comprises a floating body (or collection of bodies) which are connected to the sea floor (or terminals) by a system of lines that provide restoring forces against external loads. The General purpose of mooring lines is: To keep the body in reasonable proximity of some target location (Station Keeping).

The mooring system is a vital component of various floating facilities in the oil, gas, and renewables industries. However, there is a lack of comprehensive technical books dedicated to

the subject. Mooring System Engineering for Offshore Structures is the first book delivering in-depth knowledge on all aspects of mooring systems, from design and analysis to installation, operation, maintenance and integrity management. The book gives beginners a solid look at the fundamentals involved during mooring designs with coverage on current standards and codes, mooring analysis and theories behind the analysis techniques. Advanced engineers can stay up-to-date through operation, integrity management, and practical examples provided. This book is recommended for students majoring in naval architecture, marine or ocean engineering, and allied disciplines in civil or mechanical engineering. Engineers and researchers in the offshore industry will benefit from the knowledge presented
