Written by a team of lawyers with long-standing experience in patent litigation in Europe, this book is a comprehensive and practical guide to European patent law, highlighting the areas of consistency and difference between the most influential European patent law jurisdictions: the European Patent Office (EPO), England & Wales, France, Germany and the Netherlands. It is frequently the case that the decisions and approaches of these courts are cited by European patent lawyers of all jurisdictions when submitting arguments in their own national courts. The book is therefore intended to provide a guide to patent lawyers acting in the national European courts today. The book also looks to the future, by addressing all the areas of patent law for which the proposed Unified Patent Court (UPC) will need to establish a common approach. Uniquely, the book addresses European patent law by subject matter area, assessing the key national and EPO approaches together rather than in nation-by-nation chapters; and provides an outline in each chapter of the common ground between the national approaches, as a guide for the possible application of European patent law in the UPC.

An updated new version of a Business Week bestseller by a leading investment advisor takes the mystery out of high technology stocks, offering a clear analysis of the key companies, predictions of their performance, and investment formulas.

Memory matters. It matters because memory brings the past into the present, and opens it up to the future. But it also matters literally, because memory is mediated materially. Materiality is the stuff of memory. Meaningful objects that we love (or hate) function not only as aide-mémoire but are integral to memory. Drawing on previous scholarship on the interrelation of memory and materiality, this book applies recent theories of new materialism to explore the material dimension of memory in art and popular culture. The book's underlying premise is twofold: on the one hand, memory is performed, mediated, and stored through the material world that surrounds us; on the other hand, inanimate objects and things also have agency on their own, which affects practices of memory, as well as forgetting. By accounting for the material world as a medium through which acts of remembering and forgetting take place, the chapters of this book offer new insights on such topics as the study of ruins, the exchange and circulation of souvenirs, digitization and the Internet of Things, fashion and technology, as well as the material dimensions of corporeality and traumatic re-enactment.
