Strategic Planning One of  
the most useful tools for  
good strategy analysis is  
systems thinking. Some  
people think this means you  
have to treat your business  
like a computer program, but  
really it's simply a way to  
think through all of the  
connections that affect your  
business and how it both  
operates and competes in the  
marketplace.

Strategic Management System.  
To develop a strategic  
management system, Haines  
(2000) suggested using the  
"Systems Thinking Approach"  
and its five-phased (ABCDE)  
Systems Thinking model that  
invites the leader to ask  
and answer five important  
questions: (A) Where do we  
want to be? (B) How will we  
know when we get there?

Why are some organizations more successful than others? Is it better products? Is it a superior service model? Is it some mixture of the two? Is it merely a matter of lining up the products and services to meet the needs of the marketplace at a particular time? Or did they just get lucky? Many business leaders believe that the answer to these questions is a matter of strategy. Find the right strategy and the company is bound to be successful. Unfortunately, too many organizations fail to find that right strategy. The

question is why? Do they not go on enough executive retreats? Did they hire the wrong consultants? Were their PowerPoint slides just now powerful enough? While any of these factors could be a contributor, our research shows that the real driver is strategy efforts focusing too much on singular dimensions (e.g., the competition) rather than considering the entire ecosystem. Without a full view of the complete business environment, it is impossible to make fully informed decisions. Without being fully informed, we risk making the wrong choices. The Systems

Thinking Strategy addresses this issue by providing a holistic approach that incorporates multiple domains into the strategy discussion. It allows us to understand how our Capabilities, our Customers, and the Competitive Environment are all impacting our business success. It then provides an approach to making sense of those disparate data points so that we can make the right decisions to drive business success.

Inspired by General Systems Theory (GST), envisions an organization in which people and groups work together interdependently across organizational divides to reach a shared, rewarding future. GST has dramatically influenced physics, biology, economics, healthcare and environmental science, but has not as yet had any significant influence on the way companies work and are structured. This new, systems way of working promises a break from the influence of Sir Isaac Newton and René Descartes - thinking that has dominated worldviews for almost 400 years - and offers workers

Donors, leaders of nonprofits, and public policy makers usually have the best of intentions to serve society and improve social conditions. But often their solutions fall far short of what they want to accomplish and what is truly needed. Moreover, the answers they propose and fund often produce the opposite of what they want over time. We end up with temporary shelters that increase homelessness, drug busts that increase drug-related crime, or food aid that increases starvation. How do these unintended consequences come about and
