The Theory of Constraints is a process improvement methodology that emphasizes the importance of identifying the " system constraint " or bottleneck. By leveraging this constraint, organizations can achieve their financial goals while delivering on-time-in-full (OTIF) to customers, avoiding stock-outs in the supply chain, reducing lead time, etc.

The theory of constraints adopts the  
common idiom “ a chain is no stronger  
than its weakest link. ” This means that  
processes, organizations, etc., are vulnerable  
because the weakest person or part can  
always damage or break them or at least  
adversely affect the outcome.
