The #1 New York Times bestselling coauthor of American Sniper brings the Pony Express to life in this rich and rollicking new history "One can hear horse hooves pounding across the prairie and sense the fear and courage and excitement." —Tom Clavin, author of Dodge City On the eve of the Civil War, three American businessmen launched an audacious plan to create a financial empire by transforming communications across the hostile territory between the nation 's two coasts. In the process, they created one of the most enduring icons of the American West: the Pony Express. Daring young men with colorful names like " Bronco Charlie " and " Sawed-Off Jim " galloped at speed over a vast and unforgiving landscape, etching an irresistible tale that passed into myth almost instantly. Equally an improbable success and a business disaster, the Pony Express came and went in just eighteen months, but not before uniting and captivating a nation on the brink of being torn apart. Jim DeFelice 's brilliantly entertaining West Like Lightning is the first major history of the Pony Express to put its birth, life, and legacy into the full context of the American story. The Central Overland California and Pikes Peak Express Company—or " Pony Express, " as it came to be known—was part of a plan by William Russell, Alexander Majors, and William Waddell to create the next American Express, a transportation and financial juggernaut that already dominated commerce back east. All that stood in their way were almost two thousand miles of uninhabited desert, ice-capped mountains, oceanic plains roamed by Indian tribes, whitewater-choked rivers, and harsh, unsettled wilderness. The Pony used a relay system of courageous horseback riders to ferry mail halfway across a continent in just ten days. The challenges the riders faced were enormous, yet the Pony Express succeeded, delivering thousands of letters at record speed. The service instantly became the most direct means of communication between the eastern United States and its far western territories, helping to firmly connect them to the Union. Populated with cast of characters including Abraham Lincoln (news of whose electoral victory the Express delivered to California), Wild Bill Hickock, Buffalo Bill Cody (who fed the legend of the Express in his Wild West Show), and Mark Twain (who celebrated the riders in Roughing It), West Like Lightning masterfully traces the development of the Pony Express and follows it from its start in St. Joseph, Missouri—the edge of the civilized world—west to Sacramento, the capital of California, then booming from the gold rush. Jim DeFelice, who traveled the Pony 's route in his research, plumbs the legends, myths, and surprising truth of the service, exploring its lasting relevance today as a symbol of American enterprise, audacity, and daring.

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and

schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
